Software Engineer — Automation, Monitoring & Platform Reliability

Profile

Engineer with a dual background in aerospace systems and software development. Trained in real-time embedded systems and signal processing at Thales Alenia Space, I subsequently deepened my software engineering skills across large-scale distributed platforms, automation tooling, and operational monitoring. I enjoy working at the intersection of reliability and scale — triaging complex production issues, building automation that removes repetitive work, and turning raw metrics into clear operational insight.

Experience

Principal Technical Support Engineer

Aug 2016 – Sep 2026

Salesforce Commerce Cloud — Remote, Germany

Berlin, DE

Career progression: Associate (Aug 2016) → Senior, double promotion (Feb 2018) → Principal (Feb 2022)

- Investigated and resolved complex platform and integration issues within a 24/7 incident management framework, maintaining high-availability SLAs for critical production systems.
- Reviewed infrastructure capacity against projected customer load with Performance Engineering, adjusting backend provisioning ahead of peak traffic events, and acted as technical point of contact with vendors (Cloudflare, Oracle) and customers on CDN/WAF setup, database platform issues, and capacity planning.
- Investigated performance issues end-to-end across the stack — frontend network traces (HAR analysis), Redis caching, Java application internals, ORM query behavior, and SQL query tuning — to isolate bottlenecks and drive fixes.
- Audited customer storefronts and their backend infrastructure ahead of high-demand sales events (Black Friday and other "hype" sales), then monitored real-time traffic and virtual waiting rooms scaling up to 10–20k concurrent users per event.
- Built internal automation tooling used by 1000+ engineers: TypeScript browser extensions, scripted diagnostic workflows, and Grafana/Graphite dashboards aggregating performance metrics across hundreds of customer storefronts for real-time monitoring and anomaly detection.
- Triageed, root-caused, and resolved high-severity production incidents across distributed microservices; wrote post-mortems and drove process improvements to prevent recurrence.
- Collaborated with cross-functional engineering teams in Agile sprints; contributed Python and JavaScript scripts to internal tooling repositories via Git/CI pipelines (Jenkins); authored and maintained technical runbooks and escalation procedures, improving mean-time-to-resolution for the team.
- Interviewed candidates, onboarded, and trained new team members, a responsibility held since the promotion to Senior in 2018.

R&D Apprentice Engineer — Dynamics & Control

Sep 2012 – Sep 2015

Thales Alenia Space

Cannes, France

- Worked within the expert department of the Assembly, Integration & Test (AIT) center on satellite ground testing systems (reference letter available from the head of department).
- Designed and implemented a MATLAB simulator for vibration testing: sensor data filtering, equipment model identification, and response prediction at higher excitation levels.
- Developed a real-time HW/SW co-design system for vibration test simulation: designed the RTOS-based real-time task scheduling, implemented a new control law for servo control, and successfully attenuated beating phenomena in structural test rigs.
- Gained hands-on exposure to space-grade hardware testing environments and the rigorous verification processes typical of satellite AIT campaigns.

Web Developer (Internship)

2012 — 3 months

Eolas / Business & Decision

Grenoble, France

- Designed and implemented the accounting module of an internal intranet; managed deployment from development to production servers.

Education

Engineer / M.Sc. — Computer Science & Applied Mathematics (High Distinction) 2012 – 2015
Ensimag — École Nationale Supérieure d'Informatique et de Mathématiques Appliquées (CTI accredited) Grenoble, France

Erasmus Exchange — Last-Year Specialization 2014 – 2015
KTH Royal Institute of Technology Stockholm, Sweden
Two tracks: Networked & Computer Security (protocols, cryptography, intrusion detection) — Embedded Systems & Hardware Design (VHDL, ASIC design flow, digital logic)

Technical Degree (DUT) — Computer Science 2010 – 2012
IUT2 Grenoble Grenoble, France

Baccalauréat — Scientific Series (High Distinction) 2007 – 2010
Lycée Hector Berlioz La Côte-Saint-André, France

Technical Skills

Languages	Python (scripting, data analysis, automation) & JavaScript / TypeScript (Advanced, 15y) & Java & C / C++ & Rust & PHP & SQL/PostgreSQL & Bash
Automation & DevOps	Git (10y) & Jenkins & CI/CD pipelines & Docker & Kubernetes (initiated) & Nginx & Apache
Monitoring & Data	Grafana & Graphite & Real-time dashboarding & Metrics aggregation & Statistical analysis & Performance investigation (HAR traces, Redis, ORM & SQL query tuning)
Infrastructure & Vendors	Capacity planning & backend provisioning & Peak-event (Black Friday) readiness audits & Virtual waiting rooms & Cloudflare (CDN/WAF) & Oracle DB
Platforms & IDE	Linux (CentOS, Debian, Ubuntu, Kali) & macOS & Windows & VS Code & Eclipse (incl. Eclipse MAT) & NetBeans & IntelliJ
Systems & OS	Real-time embedded systems & RTOS & HW/SW co-design
Space & Engineering	MATLAB & Signal processing & Control systems & Satellite AIT environments & Vibration testing
Networking	TCP/IP & Addressing & subnetting & DNS/DNSSEC & HTTP/HTTPS & NAT & Dynamic routing & BGP (S-BGP/soBGP) & 802.11 & Nmap & Wireshark & Signal transmission
Security	Firewalls (ipf/iptables) & TLS/SSL & PKI & Diffie-Hellman & RSA/AES & PGP & IDS/IPS & DDoS prevention & CSRF/XSS/SQL injection & MITM & Honeypots & WEP/WPA

Languages

French — Native **English** — Fluent **Spanish** — Fluent **German** — Beginner (A2)

Interests & Other

Aerospace & space exploration & Robotics & embedded systems & Geopolitics & Ecology & Swimming & Archery & Music & Extensive travel (Albania, Estonia, Chile, Tunisia, USA...) & Driving licence (EU).
